DOORS

An AIRXCEL Brand

Baggage Doors: **An Engineered System**

A baggage door with tighter seals, smarter drainage, stronger hinges, and better install surfaces.

Better for your team and your customers.

This is not a commodity door—it is purposefully redesigned to improve performance where competitors cut corners.

Engineered for real-world water management, this baggage door is built to reduce leaks, swelling, and costly warranty events.

It's a “details-matter” baggage door.

- Water-Resistant Core
- Flush-Mount Top Hinge
- Integrated Drainage Channel
- Updated Seal Strategy
- Built-In Manufacturing Quality
- Reinforced Outer Seal Surface
- Alternative Hidden Hole Placement Options to Reduce Water Penetration

Water-Resistant Core That Won't Swell

The upgraded core material resists water intrusion and won't swell, preventing expansion that can break lamination and degrade door integrity over time. **Reduces common issues like swollen doors and water-damaged storage bays.**

Intelligent Seal Design

Flush-Mount Top Hinge Designed to Shed Water

The flush hinge design eliminates the competitor-style "void" that can become a leak point. A built-in ramp effect sheds water away from the door, providing a cleaner finished look and stronger nesting structure.

Precision Corner Geometry for a More Consistent Seal

Tightened corner radiuses

Consistent reveal/gap

Improved seal compression

Internal drainage channel

Smarter sealing approach

**Rain bay tested with
significant improvement
over the competition!**
